Code No: R05220501 **R05** **Set No. 2**

II B.Tech II Semester Examinations,APRIL 2011
SOFTWARE ENGINEERING
Common to Information Technology, Computer Science And Engineering, Computer Science And Systems Engineering

Time: 3 hours **Max Marks: 80**

Answer any FIVE Questions
All Questions carry equal marks

⋆ ⋆ ⋆ ⋆ ⋆

1. (a) Define system requirements. Explain their purpose. How would you specify them?
   (b) Why is it virtually impossible to exclude all design information from system requirements? [9+7]
2. Discuss in detail about software reviews. [16]
3. (a) what is an Object? Explain with an example how objects are identified by grammatical parsing? [8]
   (b) Object-Oriented systems are easier to change than systems developed using other approaches. Discuss [8]
4. (a) Compute the function point value for a project with the following information domain characteristics.
   Number of external inputs: 32
   Number of external outputs: 60
   Number of external inquires: 24
   Number of external interface files: 2
   Number of internal logical files: 8
   Assume that all complexity adjustment values are average. [8]
   (b) What is an indirect measure? And how are such measures common in software metrics work? [8]
5. (a) Explain the five software assessment principles.
   (b) Discuss about various phases of software assessment. [6+10]
6. (a) What are component and deployment diagrams? Differentiate between them.
   (b) Elaborate on pattern based software design. [5+3+8]
7. (a) Discuss how information is collected in VORD.
   (b) Explain the application of VORD for bank ATM. [6+10]
8. (a) The software analysis and design are constructive tasks, and software testing is considered to be destructive from the point of view of developer. Discuss. [8]

(b) Who will test the software, either developer or an independent test group? Discuss the advantage and draw backs of each one. [8]
